DETAILED ACTION

Election/Restrictions

Applicant's election with traverse of Group II (claims 9-16) in the reply filed on 4/2/2007 is acknowledged. The traversal is on the ground(s) that searching both groups would not be a serious burden to the examiner. This is not found persuasive because as shown in the restriction requirement, the searches for these invention are in different classes. This would require two different searches and would indeed provide a serious burden to the examiner.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless – (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 9-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Bolduan (US Pub. 2002/0178764).

Bolduan discloses a method of controlling wash water circulation by re-circulating wash water by operating a pump (10) and sensing the pressures (12). Bolduan specifically describes measuring the delivery pressure (discharging pressure) and supplying the water if the pressure is less than sufficient or stopping the supply if it is greater than the sufficient (paragraph 5). Bolduan further describes the pump is stopped for a period of time and water is supplied and also measurements taken (paragraph 35). Although Bolduan does not

Art Unit: 1746

specifically describe the pump stopping time as shorter than the operating time, Bolduan does describe that the pump is stopped for "short" time periods, which would inherently suggest that the pump is off for a small time compared to when it is on.
